

Lab - 3: Task 3

Objective:

Read a huge file from the bucket and copy the contents to another file using Dataflow.

Instructions:

1. Install apache-beam[gcp] : `pip install apache-beam[gcp]`.
2. Use the following code to copy the contents of a large file to another file

```
import apache_beam as beam
from apache_beam.io import ReadFromText
from apache_beam.io import WriteToText
from apache_beam.options.pipeline_options import PipelineOptions
from apache_beam.options.pipeline_options import GoogleCloudOptions
from apache_beam.options.pipeline_options import StandardOptions
options = PipelineOptions()
google_cloud_options = options.view_as(GoogleCloudOptions)
google_cloud_options.project = '<projectid>'
google_cloud_options.job_name = '<job name>'
Google_cloud_options.region = "us-central1"
google_cloud_options.temp_location="gs://bd12022/tmp"
options.view_as(StandardOptions).runner = 'DataflowRunner'
with beam.Pipeline(options=options) as p:
    lines = p | 'Read' >> beam.io.ReadFromText( 'gs://bd12022/out.txt' ) | 'Write' >>
    beam.io.WriteToText( '<output_path>' )
```
